

Business Use Case: AI-Powered Daily News Automation using n8n

Project Title

Daily AI News Automation – Automated Market Intelligence & Email Digest using n8n

Business Problem

Product teams, business leaders, and technology professionals need to stay updated with the rapidly evolving Artificial Intelligence ecosystem. However, manually browsing multiple news websites, blogs, and RSS feeds every day is time-consuming and often leads to missed industry updates.

Without a centralized news aggregation process:

- Valuable industry insights are overlooked.
- Teams spend excessive time searching for relevant information.
- Competitive awareness decreases.
- Decision-making becomes reactive instead of proactive.
- Knowledge sharing across teams becomes inconsistent.

As the volume of AI-related content continues to grow, manual tracking becomes inefficient and difficult to sustain.

Objective

Develop an automated workflow that collects the latest AI news from trusted RSS sources, filters the most relevant articles, stores them in a centralized repository, and delivers a daily email digest to stakeholders.

The primary goals are to:

- Automate AI news monitoring
 - Reduce manual research effort
 - Improve knowledge sharing
 - Enable faster strategic decision-making
 - Keep teams informed about emerging AI trends
-

Solution

Built a **Daily AI News Automation** workflow using **n8n** that automatically aggregates AI-related news from RSS feeds, limits the results to the most relevant articles, stores them in Google Sheets, and sends a daily email summary via Gmail.

The automation ensures that stakeholders receive curated AI news without manually visiting multiple websites.

Business Workflow

1. A Schedule Trigger runs automatically at a predefined time every day.
 2. The workflow fetches AI-related articles from RSS feeds.
 3. The system retrieves the latest published news.
 4. A Limit node filters the output to the top relevant articles.
 5. The selected news articles are appended to a Google Sheet for historical tracking.
 6. A formatted email digest is generated.
 7. The latest AI news summary is automatically delivered to users via Gmail.
-

Key Features

- Automated daily news collection
 - RSS feed aggregation
 - Scheduled execution
 - Google Sheets integration
 - Email notification system
 - Historical news repository
 - No manual monitoring required
 - Low-code workflow automation
-

Business Value Delivered

1. Saves Research Time

Automates daily news collection, eliminating the need to browse multiple websites manually.

2. Improves Decision Making

Provides timely information on AI trends, enabling leaders and product teams to make informed strategic decisions.

3. Enhances Competitive Intelligence

Tracks emerging technologies, product launches, funding announcements, and industry developments in one place.

4. Centralized Knowledge Repository

Stores news articles in Google Sheets, creating a searchable archive for future analysis and reporting.

5. Consistent Knowledge Sharing

Ensures all stakeholders receive the same curated information simultaneously through automated email notifications.

6. Increased Productivity

Employees spend less time searching for news and more time analyzing insights and implementing ideas.

7. Scalable Information Monitoring

The workflow can easily be extended to monitor multiple industries, competitors, technologies, or market segments without additional manual effort.

Product Metrics (KPIs)

North Star Metric

Percentage of Relevant News Successfully Delivered to Stakeholders

Success Metrics

- Daily News Delivery Success Rate
- Workflow Execution Success Rate
- Time Saved on Manual Research
- Email Open Rate
- News Coverage Accuracy
- Number of Articles Collected Daily
- Duplicate Article Rate
- Knowledge Repository Growth
- User Engagement with Daily Digest
- Automation Reliability

Technical Architecture

Automation Platform: n8n

Trigger: Schedule Trigger

Data Source: RSS Feed

Data Processing: Filter and Limit Node

Storage: Google Sheets

Notification: Gmail Integration

Workflow:

Schedule Trigger → RSS Feed → Filter Top Articles → Store in Google Sheets → Send Email Digest

Expected Business Impact

- 80–90% reduction in manual news monitoring effort
- Daily automated industry intelligence without manual intervention
- Improved awareness of AI market trends and competitor activities
- Faster strategic planning through timely insights
- Centralized historical database for trend analysis
- Increased productivity by automating repetitive information gathering
